

C³I SYSTEMS

An important part of LETVIS[®] system is represented by military applications intended for military ATM systems and Air Defence Systems support based on LETVIS[®] AD software and employed since 1993. LETVIS[®] AD system provides an integrated C3I system for Air Defence missions at centralized and/or decentralized command levels. LETVIS[®] AD is a tool suitable for integration into fixed/mobile command and control centres to provide timely and effective protection of vital assets and areas. The system is interoperable with both NATO and non-NATO systems.

The LETVIS[®] system was developed in close co-operation with both civilian and military ATC controllers and Air Defence specialists. Each LETVIS[®] based application is designed according to customer requirements. Features such as open system architecture, software modularity, hardware options (INTEL[®] PC or Sun[™] SPARC[™] platforms), interfaces with non-standard systems, Russian or out-of-date radars, networking capability and custom - tailored solutions provide a powerful platform for the future enhancement of LETVIS[®] applications.
