

CONSOLES PROGRAMME

Consoles and cabinets to be housed in fixed/mobile control centres have been manufactured by ALES since 1995. This product family meets the appropriate working environment - related standards. The operator consoles serve for round-the-clock operations which have to meet most stringent requirements in terms of ergonomics and the operating staff comfort. Equipment cabinets/racks are intended for a well - organised and safe accommodation of the technical equipment in equipment rooms and at industrial plants.

ALES furniture design renders the advantage of modularity and configuration variations. This enables the shape and size of each console to be designed according to the integrated equipment appropriate to the user role and the missions executed. A variety of configurations can be provided, while adapted to a space available.

Material used for consoles/cabinets construction is a combination of metal and plastics of high thermal and mechanical stability and chemical resistance. Moreover, marble-like appearance with optional colours, soft-to-touch surface, matt finish, etc. in addition to the above features make the furniture suitable for use in a wide range of most critical applications.
